BASIC ABSTRACT:

EP 800118 A UPAB: 19971113

A carrier for developer of an electrostatic latent image is new. The carrier comprises a core covered with a resin coating layer containing resin particles and an electroconductive fine powder in the form of a dispersion in a matrix resin.

Also claimed are (i) manufacture of a carrier for developer of an electrostatic latent image; (ii) a developer of an electrostatic latent image comprising the carrier; (iii) an image forming method for developing an electrostatic latent image; and (iv) an image forming apparatus.

USE - A carrier for developer of an electrostatic latent image in electrostatic photography and electrostatic recording is provided.

ADVANTAGE - The carrier has excellent ability to impart charge suitably and stably to a toner and has a structure durable enough to maintain the ability for a long period of time such that the structure can prevent the toner from being adhered onto the carrier surface for a long period of time. A high quality image results from use of this developer.
